The closest prior art of record, Liu et al. to US 6,352,896, teaches a related

semiconductor device, as stated in the previous Office Action.

In contrast, Liu et al. at least neither teach nor suggest forming a plurality of contact plugs through the first and the second interlayer insulating layers to respectively contact the sidewalls and a predetermined portion of the top surface of each of the plurality of second SACs; and forming a plurality of bit lines, each of the plurality of bit lines respectively formed along one of the plurality of second rows and extending in a direction of the major axis of each of the plurality of active regions, the plurality of second rows corresponding to areas having an absence of contact between any of the plurality of active regions and a top surface of any of the plurality of contact plugs.

Therefore, the instant invention is neither anticipated nor rendered obvious over the prior art of record.
